

# Package: kwb.pkgstatus (via r-universe)

September 15, 2024

**Title** R package for checking KWB package status

**Version** 0.3.5

**Description** R package for checking KWB package status (e.g. generating <https://kwb-r.github.io/status>).

**License** MIT + file LICENSE

**URL** <https://github.com/KWB-R/kwb.pkgstatus>

**BugReports** <https://github.com/KWB-R/kwb.pkgstatus/issues>

**Imports** data.table, dplyr, fs, gh, httr, jsonlite, kwb.pkgbuild, lubridate, magrittr, stringr

**Suggests** covr, knitr, rmarkdown, testthat (>= 3.0.0)

**VignetteBuilder** knitr

**Remotes** github::kwb-r/kwb.pkgbuild

**ByteCompile** true

**Config/testthat/edition** 3

**Encoding** UTF-8

**LazyData** true

**RoxygenNote** 7.1.1

**Repository** <https://kwb-r.r-universe.dev>

**RemoteUrl** <https://github.com/KWB-R/kwb.pkgstatus>

**RemoteRef** HEAD

**RemoteSha** 84c6b32b8fc68e91b634ddc1f7dcbddc4ab9d84e

badge_appveyor	<i>badge_appveyor</i>
----------------	-----------------------

---

## Description

badge\_appveyor

## Usage

badge\_appveyor(repo\_full\_names)

## Arguments

repo\_full\_names  
vector with combination of username/repo (e.g. c("KWB-R/kwb.utils", "KWB-R/kwb.db"))

## Value

appveyor badges for provided repo\_full\_names

---

badge_codecov	<i>badge_codecov</i>
---------------	----------------------

---

**Description**

badge\_codecov

**Usage**

```
badge_codecov(repo_full_names)
```

**Arguments**

repo\_full\_names

vector with combination of username/repo (e.g. c("KWB-R/kwb.utils", "KWB-R/kwb.db"))

**Value**

codecov badges for provided repo\_full\_names

---

badge_cran	<i>badge_cran</i>
------------	-------------------

---

**Description**

badge\_cran

**Usage**

```
badge_cran(repo_names)
```

**Arguments**

repo\_names

vector of repository names (e.g. c("kwb.utils", "kwb.db"))

**Value**

crank badges for provided repo\_names

---

badge_dependencies	<i>badge_dependencies</i>
--------------------	---------------------------

---

**Description**

badge\_dependencies

**Usage**

```
badge_dependencies(repo_names)
```

**Arguments**

repo_names	vector of repository names (e.g. c("kwb.utils", "kwb.db"))
------------	--

**Value**

dependency badges for provided repo\_names

---

badge_gitlab	<i>badge_gitlab</i>
--------------	---------------------

---

**Description**

badge\_gitlab

**Usage**

```
badge_gitlab(
  url,
  logo_path = paste0("https://gitlab.com/gitlab-com/gitlab-artwork/raw/",
    "master/logo/logo-square.png"),
  size = 24
)
```

**Arguments**

url	url to repository on Gitlab
logo_path	path to Gitlab logo (default: "https://gitlab.com/gitlab-com/gitlab-artwork/raw/master/logo/logo-square.png")
size	size of logo in pixels (default: 24)

**Value**

Gitlab logo in html with path to repository in Gitlab

---

badge_license	<i>badge_license</i>
---------------	----------------------

---

**Description**

badge\_license

**Usage**

```
badge_license(license_keys, github_token = Sys.getenv("GITHUB_TOKEN"))
```

**Arguments**

license_keys	one or many valid license keys from c("agpl-3.0", "apache-2.0", "bsd-2-clause", "bsd-3-clause", "epl-2.0", "gpl-2.0", "gpl-3.0", "lgpl-2.1", "lgpl-3.0", "mit", "mpl-2.0", "unlicense")
github_token	github access token (default: Sys.getenv("GITHUB_TOKEN"))

**Value**

badge for all provided license keys

---

badge_opencpu	<i>badge_opencpu</i>
---------------	----------------------

---

**Description**

badge\_opencpu

**Usage**

```
badge_opencpu(
  url,
  logo_path = "https://avatars2.githubusercontent.com/u/28672890?s=200&v=4",
  size = 24
)
```

**Arguments**

url	url to repository on Gitlab
logo_path	path to OpenCpu logo (default: "https://avatars2.githubusercontent.com/u/28672890?s=200&v=4")
size	size of logo in pixels (default: 24)

**Value**

OpenCpu logo in html with path to R package on OpenCpu

---

badge_travis	<i>badge_travis</i>
--------------	---------------------

---

**Description**

badge\_travis

**Usage**

```
badge_travis(repo_full_names)
```

**Arguments**

repo\_full\_names  
vector with combination of username/repo (e.g. c("KWB-R/kwb.utils", "KWB-R/kwb.db"))

**Value**

travis badges for provided repo\_full\_names

---

badge_zenodo	<i>badge_zenodo</i>
--------------	---------------------

---

**Description**

badge\_zenodo

**Usage**

```
badge_zenodo(repo_full_names, zenodo_token = Sys.getenv("ZENODO_TOKEN"))
```

**Arguments**

repo\_full\_names  
vector with combination of username/repo (e.g. c("KWB-R/kwb.utils", "KWB-R/kwb.db"))

zenodo\_token    zenodo authentication token (default: Sys.getenv("ZENODO\_TOKEN"))

**Value**

zenodo badges for provided repo\_full\_names

---

check_docu_dev	<i>Check documentation: development</i>
----------------	---

---

**Description**

Check documentation: development

**Usage**

```
check_docu_dev(repo_names, url = "http://kwb-r.github.io")
```

**Arguments**

repo_names	vector of repository names to be checked
url	main url for Github pages (default: "http://kwb-r.github.io")

**Value**

character vector with links in case documentation of development version for R packages is available

---

check_docu_release	<i>Check documentation: release</i>
--------------------	-------------------------------------

---

**Description**

Check documentation: release

**Usage**

```
check_docu_release(repo_names, url = "http://kwb-r.github.io")
```

**Arguments**

repo_names	vector of repository names to be checked
url	main url for Github pages (default: "http://kwb-r.github.io")

**Value**

character vector with links in case documentation of latest release for R packages is available

---

check_gitlab_backup	<i>check_gitlab_backup</i>
---------------------	----------------------------

---

**Description**

check\_gitlab\_backup

**Usage**

```
check_gitlab_backup(
  group = "KWB-R",
  github_token = Sys.getenv("GITHUB_TOKEN"),
  gitlab_token = Sys.getenv("GITLAB_TOKEN")
)
```

**Arguments**

group	username or organisation for Github/Gitlab (default: "KWB-R")
github_token	github access token (default: Sys.getenv("GITHUB_TOKEN"))
gitlab_token	gitlab access token (default: Sys.getenv("GITLAB_TOKEN"))

**Value**

data.frame containing all Github repositories that are mirrored in Gitlab (i.e. were at least synchronised within the last 2 hours)

---

check_opencpu_deploy	<i>check_opencpu_deploy: get all Github repos that are deployed on OpenCpu</i>
----------------------	--

---

**Description**

Direct deployment of R packages (including vignette build) by using webhooks as described in OpenCpu blog post (<https://www.opencpu.org/posts/opencpu-release-1-4-5/>) and online help (<https://www.opencpu.org/cloud/>)

**Usage**

```
check_opencpu_deploy(group = "KWB-R")
```

**Arguments**

group	username or organisation for Github (default: "KWB-R")
-------	--

**Value**

data.frame containing names with OpenCpu badges for all Github repositories that are deployed on OpenCpu (default: <https://kwb-r.ocpu.io>)

---

```
create_report_rpackages
      Create R packages status report#'
```

---

### Description

Create R packages status report#'

### Usage

```
create_report_rpackages(
  secrets_csv = NULL,
  non_r_packages = get_non_r_packages(),
  export_dir = ".",
  input_rmd = system.file("extdata/reports/status_report.Rmd", package =
    "kwb.pkgstatus")
)
```

### Arguments

secrets_csv	path to "secrets.csv" file, if "NULL" Sys.env variables for the following services are used/need to be defined: APPVEYOR_TOKEN, GITHUB_TOKEN, GITLAB_TOKEN, CODECOV_TOKEN, ZENODO_TOKEN, (default: NULL)
non_r_packages	a character vector with repositories in KWB-R group that are not R packages (default: get_non_r_packages)
export_dir	report export directory (default: ".")
input_rmd	default: system.file("extdata/reports/status_report.Rmd", package = "kwb.pkgstatus")

### Value

creates html status report for R packages and returns the absolute path to the export directory

---

```
get_coverage      get_coverage
```

---

### Description

get\_coverage

### Usage

```
get_coverage(
  repo_full_name,
  codecov_token = Sys.getenv("CODECOV_TOKEN"),
  dbg = TRUE
)
```

**Arguments**

repo\_full\_name one combination of username/repo (e.g. "KWB-R/kwb.db")  
 codecov\_token codecov authentication token (default: Sys.getenv("CODECOV\_TOKEN"))  
 dbg debug if TRUE (default: TRUE)

**Value**

codecov coverage in percent for provided repo\_full\_name

---

<code>get_coverages</code>	<i>get_coverage</i>
----------------------------	---------------------

---

**Description**

`get_coverage`

**Usage**

```

get_coverages(
  repo_full_names,
  codecov_token = Sys.getenv("CODECOV_TOKEN"),
  dbg = TRUE
)

```

**Arguments**

repo\_full\_names  
                   vector with combination of username/repo (e.g. c("KWB-R/kwb.utils", "KWB-R/kwb.db"))  
 codecov\_token zenodo authentication token (default: Sys.getenv("CODECOV\_TOKEN"))  
 dbg debug if TRUE (default: TRUE)

**Value**

data.frame with coverage percent and url for all provided repo\_full\_names

---

get_github_repos	<i>get_github_repos</i>
------------------	-------------------------

---

**Description**

get\_github\_repos

**Usage**

```
get_github_repos(group = "KWB-R", github_token = Sys.getenv("GITHUB_TOKEN"))
```

**Arguments**

group	username or organisation for Github (default: "KWB-R")
github_token	github access token (default: Sys.getenv("GITHUB_TOKEN"))

**Value**

data.frame with for all repositories of the user/organisation defined in parameter group (private repos will only be accessible if the token is configured to allow that)

---

get_gitlab_repos	<i>get_gitlab_repos</i>
------------------	-------------------------

---

**Description**

get\_gitlab\_repos

**Usage**

```
get_gitlab_repos(group = "KWB-R", gitlab_token = Sys.getenv("GITLAB_TOKEN"))
```

**Arguments**

group	username or organisation for Gitlab (default: "KWB-R")
gitlab_token	gitlab access token (default: Sys.getenv("GITLAB_TOKEN"))

**Value**

data.frame with for all repositories of the user/organisation defined in parameter group (private repos will only be accessible if the token is configured to allow that)

---

get\_non\_r\_packages      *Helper function: get\_non\_r\_packages*

---

**Description**

Helper function: get\_non\_r\_packages

**Usage**

```
get_non_r_packages()
```

**Value**

returns vector with KWB-R repos on Github, which are not R packages

**Examples**

```
get_non_r_packages()
```

---

prepare\_status\_rpackages  
*prepare\_status\_rpackages*

---

**Description**

prepare\_status\_rpackages

**Usage**

```
prepare_status_rpackages(  
  secrets_csv = NULL,  
  non_r_packages = get_non_r_packages()  
)
```

**Arguments**

secrets\_csv      path to "secrets.csv" file, if "NULL" Sys.env variables for the following services are used/need to be defined: APPVEYOR\_TOKEN, GITHUB\_TOKEN, GITLAB\_TOKEN, CODECOV\_TOKEN, ZENODO\_TOKEN, (default: NULL)

non\_r\_packages    a character vector with repositories in KWB-R group that are not R packages (default: get\_non\_r\_packages)

**Value**

data.frame with R package status information

---

process\_hitter\_response  
*Helper function for Zenodo*

---

**Description**

Helper function for Zenodo

**Usage**

```
process_hitter_response(response)
```

**Arguments**

response      response provided by htrr::content()

**Value**

a tibble of available Zenodo data

---

url\_success      *url\_success*

---

**Description**

url\_success

**Usage**

```
url_success(url)
```

**Arguments**

url      url of documentation website

**Value**

TRUE in case HTTP status code is 200, if not: FALSE

---

zen\_collections      *Zenodo: get available collections*

---

**Description**

Zenodo: get available collections

**Usage**

```
zen_collections(n = 1000, access_token = Sys.getenv("ZENODO_TOKEN"))
```

**Arguments**

n                      number of zenodo entries ("size") to return per API call (default: 1000)  
access\_token      Zenodo access token (default: Sys.getenv("ZENODO\_TOKEN"))

**Value**

a tibble of available Zenodo data
